By DIGATRON

- Works in conjunction with Digatron Phoenix Data Acquisition System
- Displays lap times and engine functions
- 2 programmable displays...
  - 1 Bar & 3 Numeric Options
- Helps keep your eyes on the road ahead
- Maintains full field of view
- Wireless "Real-Time" data transmission
- Adjustable display for optimal clarity
- 2-Stage low light display booster
- Lightweight detachable display
- Uses "AAA" alkaline batteries

*SportVue Heads Up Display (HUD) is the first wireless personal display designed to enhance your racing experience. It enables you to know engine and lap information faster than looking down at the gauges, providing you more time to focus on the track.*

*"The value in using SportVue with my Digatron instrument is that I now have constant feedback, pointing straight at my face, instead of only having two or three safe places to look at my instruments every lap. It doesn't matter if you're sitting up in a sprint kart or laying down in an enduro, this unit will provide you with invaluable information."*

*Bernie Adamson, Team Owner, CMC Karts East*

*"Using the HUD feature with my Digatron instrument took my concentration on the track to the next level. It is a great tool that allowed me to better focus on my racing line, while always having the instrument info at eye level."*

*Mike Greiner #88 Sprint Kart Racer*
